

DOWN SLOPE

Hydraulic braking device **in case of installation of slope downhill sliding gates**

- ▶ The product has a hydraulic mechanism that is activated with sloping gates and prevents the gate from accelerating during movement.
- ▶ The force is adjustable by turning a knob, which acts on the oil flow
- ▶ Universal, can be installed both on the right and on the left of the sliding door.
- ▶ The device is ideal for module 4 racks and applicable on all types of installations.
- ▶ Height-adjustable fixing plate for the various models of sliding operators.
